

Experiment 11: Online Super Market

Question:

Create a simple cloud software application for an **Online Super Market** using any Cloud Service Provider with customer details, item classification, quantity, and order information.

Aim:

To develop a cloud-based Online Super Market System for managing customers, products, and online orders.

Procedure:

1. Create Customer Registration, Item Classification, and Order forms.
2. Enter customer and product details.
3. Link Customer and Item forms using Lookup fields.
4. Record item quantities and calculate total price.
5. Generate order reports.
6. Test the ordering process.
7. Publish the application.

Implementation:

The screenshot displays the 'Online Super Market' application interface. On the left is a dark sidebar with a menu containing 'Customer', 'Customer Report', 'Item Master', and 'Order'. The main area is titled 'Customer' and contains a registration form with the following fields: 'Customer Name' (split into 'First Name' and 'Last Name'), 'Customer ID' (with a masked input '#####'), 'Phone' (with a dropdown for country code '+91' and a text input for the number '81234 56789'), 'Email', and 'Address' (with a label 'Address Line 1' below the input). A blue 'Submit' button is located at the bottom of the form. The browser's address bar shows 'Online Super Market' and the page has a 'Trial ex' label in the top right corner.

Result:

A cloud-based Online Super Market System was successfully developed. The application manages customer information, product inventory, orders, billing, and order reports efficiently using a SaaS platform.
