

Experiment 4: Library Book Reservation System

Question:

Create a simple cloud software application for the **SIMATS Library Book Reservation System** using any Cloud Service Provider with fields such as Book Title, Author, Publication, Edition, Rack Number, Number of Copies, and Status.

Aim:

To develop a cloud-based Library Book Reservation System for managing books and student reservations.

Procedure:

1. Create Student, Book Details, and Reservation forms.
2. Add book information and availability.
3. Connect Student and Book forms using Lookup fields.
4. Record issue and return dates.
5. Generate reservation reports.
6. Test the reservation process.
7. Publish the application.

Implementation:

The screenshot displays the 'Library Book Reservation System' web application. The interface includes a dark sidebar with navigation options: 'Customer', 'Customer Report', 'Student', 'Book Details', and 'Reservation'. The main content area is titled 'Customer' and contains a form with the following fields: 'Name' (split into 'First Name' with the value 'Mrudula' and 'Last Name' with the value 'Sai'), 'Phone' (with a dropdown for country code '+91' and a text input for the number '9874563210'), and a 'Submit' button. The top of the application shows a trial expiration notice: 'Trial expires in 1 day' with links for 'Upgrade', 'Edit this application', and 'Help'. The bottom of the image shows a Windows taskbar with the system clock at 10:50 PM and temperature at 30°C.

Result:

A cloud-based Library Book Reservation System was successfully developed. The application manages book inventories, reservations, issue/return details, and book availability efficiently.
