

Experiment 5: Mark Sheet Processing System

Question:

Create a simple cloud software application for a **Mark Sheet Processing System** using any Cloud Service Provider with student details, subjects, marks, average, percentage, rank, and overall performance.

Aim:

To develop a cloud-based Mark Sheet Processing System that automatically calculates student academic results.

Procedure:

1. Create Student, Subject, and Mark Entry forms.
2. Enter subject-wise marks.
3. Use formulas to calculate total, average, and percentage.
4. Calculate rank and overall performance.
5. Link Student and Subject forms using Lookup fields.
6. Generate mark sheet reports.
7. Publish the application.

Implementation:

The screenshot displays a web application titled "Mark Sheet Processing" in the browser's address bar. The interface features a dark sidebar on the left with navigation links: "Dashboard", "Exam Records", "Class Performance", "Subjects", "Students", "+ Students" (highlighted in orange), "Students Report", and "Exam Sessions". The main content area, titled "Students", contains a form with the following fields: "First Name" (text input), "Last Name" (text input), "Date of Birth" (date picker showing "dd-MM-yyyy"), "Enrollment Number" (text input), "Class" (text input), and "Admission Date" (date picker showing "dd-MM-yyyy"). Below the form are two buttons: "Submit" (orange) and "Reset" (white). The top of the page shows a trial expiration notice: "Trial expires in 1 day" with an "Upgrade" button, and links for "Edit this application" and "Help".

Result:

A cloud-based Mark Sheet Processing System was successfully developed. The application calculates marks, average, percentage, rank, and generates mark sheets automatically.
